Re: New Model 16 Auger Output Shafts (Code 7 & 8)

Heco Inc. is pleased to announce the introduction of two new output shaft configurations for our Model 16 series of Reducers. The new shafts are used in standard auger configurations and make the HECO Model 16 a very desirable alternative for these types of applications.

Enclosed are diagrams showing the new output shafts on both the single and double reduction Model 16 with the center and front style-mounting flanges. These Reducers are available from HECO Inc. based upon our standard lead-time of 4-6 weeks. If you would like any additional information, feel free to contact us. Thank you.

Sincerely,
Heco Incorporated
